

/ Training Stage:

- A. the process of using neural network with adjusting parameters, tuning hyperparameters, and evaluating generalization.
- B. the process might be done on servers in cloud.
- C. the process might be done before deploying to production

/ Inference Stage:

- A. the process of using neural network **without** adjusting parameters, tuning hyperparameters, and evaluating generalization **anymore**.
- B. the process might be done on **less powerful devices** (Ex: phone or tablet)
- C. the process might be done **after** deploying to production
