

1. Difference Between in "Mathematics" and "Deep Learning":

- A. the variable x in Ch2-2 Note: Concept of Derivative in "Mathematics" and Ch2-3 Note: Gradient Descent Method in "Mathematics", need to be replaced to variable w (weight) in Deep Learning.
- B. the function y in Ch2-2 Note: Concept of Derivative in "Mathematics" and Ch2-3 Note: Gradient Descent Method in "Mathematics", need to be replaced to function z (weighted sum function) in Deep Learning.
- C. in Deep Learning, input (x) is constant not variable and weight (w) is variable not constant.
